Type: ROUTINE INSPECTION

Date: 24-JUL-2014

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

**** The female mouflon named Eudora in the loop area had a significant head tilt to the left and she circled clockwise when she walked. A head tilt and circling may indicate a neurological problem which can be due to infection, parasites, neoplasm or inflammation. Eudora should be evaluated by a veterinarian to determine the cause of the head tilt and circling. The licensee shall obtain a diagnosis, appropriate treatment to address the condition, a plan for follow-up to ensure this animal's condition is resolved. The licensee shall establish and maintain programs of adequate veterinary care that include the use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries.

To be corrected by 7/26/2014.

3.75

HOUSING FACILITIES, GENERAL.

**** The sheltered spider monkey facility is constructed of cement flooring. There is a large crack running across the floor. It was indicated that the crack in the flooring was sealed 4 years ago. Cracked surfaces can lead to potential disease hazards, odors, and cannot be readily cleaned or sanitized. All surfaces in direct contact with the animals must be maintained and repaired consistently when worn. Correct by 9/15/2014

**** The sheltered lemur facility has significant rust on the lower rails in the indoor portion of the enclosure. The rust has caused sharp jagged edges on the bottom rail of the indoor portion of this enclosure. The metal base of the enclosure has rust that flakes off when touched. These rusted surfaces can cause injury are unable to be adequately cleaned and sanitized. The licensee must ensure that all surfaces in contact with the animals are in good repair to prevent injury and must be free of excessive rust that prevents the required cleaning and sanitization. Correct by 10/14/2014.

**** The interior portion of the sheltered spider monkey enclosure contains a public viewing window with a wood window sill. The window sill has deteriorated to the point that it is falling apart and needs to be replaced. These moldy, rotten, wood surfaces can cause injury because they are no longer structurally sound and are unable to be adequately cleaned and sanitized. The licensee must ensure that all surfaces in contact with the animals are in

good repair to prevent injury and must be able to be cleaned and sanitized.

Correct by 10/14/2014

3.81(b)

ENVIRONMENT ENHANCEMENT TO PROMOTE PSYCHOLOGICAL WELL-BEING.

**** There was not an adequate environmental enhancement plan (EEP) on hand to address the psychological well-being of the nonhuman primates. The EEP must be reviewed and approved by the attending veterinarian. There is no plan denoting the daily enrichment and no log book or calendar showing that enrichment takes place. The animals do have different items in their enclosures, but there was no written plan and no schedule of rotating or changing the items in the enclosure. The items in the enclosure were not on a written plan. The enrichment must be documented on the environmental enhancement plan, and the plan must be followed.

To be corrected by: 9/14/2014

3.125(a)

FACILITIES, GENERAL.

**** The loop area housing a pony, mouflon, aoudad, goats and domestic sheep has had significant surface erosion resulting in 12' to 18' of rough, jagged, exposed concrete around the perimeter of the enclosure and around each fence post of the enclosure. The sharp, jagged edges could potentially cause injury to the animals. The licensee must ensure that enclosures are kept in good repair including substrate addition to cover the sharp jagged concrete within the enclosure.

Correct by 11/15/2014.

Inspection and exit interview conducted with facility representative.
