JOHN L MILLER

Type: ROUTINE INSPECTION
Date: 31-MAY-2023

3.30

Watering.

There are accumulations of brown debris inside the PVC drainpipes around the water nipples for the guinea pigs. Dirt and debris accumulating around the water nipples can expose the guinea pigs to potential disease infections with bacterial, fungi, and parasites. Water receptacles such as automatic water lines must be cleaned and sanitized when dirty, and at least once every two weeks. Correct by June 1, 2023.

This inspection and exit interview were conducted with the licensee.
