Type: ROUTINE INSPECTION
Date: 30-JUN-2025

3.127(d) Critical

Facilities, outdoor.

The perimeter fences and additional security methods in place were not sufficient to keep a mountain lion from entering the facility and predating on three ungulates. The facility is located within the native habitat range for mountain lions. Between June 24, 2025, and June 26th, 2025, a mountain lion entered the facility and predated three scimitar-horned Orynx housed in the same enclosure.

All licensees who maintain animals in outdoor housing facilities are required to have a perimeter fence that is constructed so that it protects animals in the facility by restricting animals and unauthorized people from having contact with the animals in the facility. Failure to prevent the entry of animals such as mountain lions may result in harm to the regulated animals. At the time of inspection, the noncompliance had been corrected by implementing deterrent methods to prevent the entry of this mountain lion by adding motion activated sprinklers, hotwire, camera traps, surveillance, utilizing other deterrents and moving the animals to another enclosure.

Corrected at the time of inspection, June 30, 2025.

This inspection and exit interview were conducted with the facility representatives.
