Type: ROUTINE INSPECTION
Date: 17-MAY-2016

3.1(c)(1)(1)

HOUSING FACILITIES, GENERAL.

The coated wire flooring in at least four enclosures on the south side of the "Back Building," have areas of excessive rust. Eleven adult dogs can come in contact with the affected areas. The wire coating is flaking or peeling off and exposing the bare metal. The rusted and pitted wire flooring is primarily present near the front of the outdoor run and extending approximately 1-3 inches towards the back. The licensee stated that he has new material available that can be used to replace the rusted areas.

Surfaces that are not free of excessive rust cannot be readily cleaned and sanitized. Excessive rust and pitting can also affect the structural strength of the surfaces. The licensee must repair or replace the rusted wire flooring and ensure all surfaces of the housing facility are maintained on a regular basis.

To be corrected by: June 8, 2016.

Exit briefing conducted with the licensee.
