Type: ROUTINE INSPECTION
Date: 08-MAY-2014

2.40(b)(2) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

(b) Each dealer or exhibitor shall establish and maintain programs of adequate veterinary care that include(2)
There was a bottle Pyrantel Pamoate that expired 8/2012 the licensee was using to treat animals at the facility with. There are multiple dogs at the facility that have recently had fecal exams that were positive for parasites. Expired medication may not have appropriate efficacy to treat or prevent internal parasites, prevent disease or reduce pain. The licensee shall ensure that the medications at the facility are appropriately labeled and are not out of date.

2.40(b)(4)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

(b) Each dealer or exhibitor shall establish and maintain programs of adequate veterinary care that include(4)
Adequate guidance to personnel involved in the care and use of animals regarding handling, immobilization, anesthesia, analgesia, tranquilization, and euthanasia.

*Two Schnauzer puppies had been born the day before the inspection. At the time of the inspection one puppy was dead and the other puppy appeared to be dying as evidenced by lack of normal movement, thin appearance, and an inability to right itself. The enclosure had a piece of carpeting in it but the puppy was lying on the expanded metal portion of the floor when the inspectors first approached (a kennel assistant moved the puppy to the carpet when its condition was noticed). No additional heat source, such as a heat lamp, was being provided. The kennel assistant stated that both puppies had been alive earlier that day, but she did not know whether the dam had milk, whether the puppies had ever nursed, and whether the facility had heat lamps or where they would be located.

*Five weaned Pug puppies were huddled on top of each other in the corner of the inside portion of an enclosure. This litter of puppies was recovering from a respiratory problem. The kennel assistant was unaware that this behavior could indicate that the puppies were cold. She did not know whether the facility had heat lamps or where they would be located.

Inadequate training of employees on proper care and handling can compromise the health of the animals. The

3.6(a)(2)(10) REPEAT

PRIMARY ENCLOSURES.

(a) General requirements (2)(x)

There were two sets of young puppies housed on the left side of the whelping facility in enclosures that had flooring with large enough openings that their feet and legs could pass through. There were two Schnauzer puppies that were less than 24 hours old in an enclosure with their dam. The licensee had provided a mat for the puppies to lay on, however, one of the puppies was no longer on the mat and was laying on tenderfoot flooring that has large enough opening that it's feet and legs can pass through.

There was also a 1 week old Dachshund housed with its dam that was laying on carpet squares that covered the majority of the enclosure. However, there was approximately a 4 inch strip along the side of the mat that exposed tenderfoot flooring with opening large enough that the puppy's feet and legs could pass through. There was no barrier to prevent the puppy from moving the the uncovered area of flooring. Young animals that are not provided adequate support can result in an inability to learn a proper gait and has the potential to cause injury. The licensee shall provide enclosures that have flooring that does not allow the feet or legs of the animals to pass through any openings of the floor.

This inspection and exit briefing was conducted with the licensee.
