JOHN ZEISET

Type: ROUTINE INSPECTION
Date: 29-NOV-2016

2.40(b)(2) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Three dogs were observed to have long nails on their front legs during inspection. The nails on all three dogs were curling and when weight was put on the paws, the nails would stick out sideways. The observed dogs with long nails were a black and brown male Yorkie (no i.d., right front leg), a white and brown male English Bulldog (#233, right front leg), and a white and brown female Bulldog (#331, both front legs). Long nails can make it difficult for the dogs to walk. In addition, if the nails curl too much and grow too long, they can penetrate the pads of the paws and cause an infection. The licensee must ensure that the nails on the dogs are kept trim on a regular basis.

Two medications were found to be expired during inspection. B-complex 100 expired 9/16 and Triz Ultra + Keto expired 2/16. Expired medications doesn't ensure that the products are safe to use. All expired medications must be discarded once they expire.

2.50(a)(1)

TIME AND METHOD OF IDENTIFICATION.

Three adult dogs examined during inspection did not have any tags, tattoos, or microchips identifying them. Not having tags on the dogs doesn't allow for APHIS officials to be able to easily identify the dogs that are examined. All adult dogs must be identified by a tag, tattoo, or microchip. Correct by 12/13/16.

3.6(a)(2)(ii)

PRIMARY ENCLOSURES.

Carpeting in three of the whelping enclosures was frayed and had string hanging from it. Frayed carpeting can be dangerous for the puppies as they may ingest any loose strings or the strings could get wrapped around a limb and cut off circulation. All frayed carpeting needs to be either replaced, repaired, or removed. Correct immediately.

3.11(b)(2)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

During inspection, the licensee informed me that he sanitizes the enclosures about once a month. Not sanitizing the

enclosures every two weeks or more often as necessary doesn't ensure that the enclosures are clean enough to prevent the spread of disease amongst the dogs. The licensee must start sanitizing all enclosures every two weeks or more often as necessary to prevent the accumulation of dirt, debris, food waste, excreta, and other disease hazards. Correct by 12/13/16.

3.11(c)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

The scooper used to scoop the dog food into the bowls was filthy. It had what appeared to be dried up, caked on food sticking to it. The dried up food sticking on the scooper appeared to have been there for some time. Dried up food sticking onto the scooper can become moldy which can in turn contaminate any fresh feed that it comes into contact with. The scooper should be disinfected every two weeks or more often as necessary. Correct immediately.

This inspection and exit interview were conducted with the licensee.

End of report.
