Type: ROUTINE INSPECTION  
Date: 28-OCT-2024

---

### 3.50(a) Repeat

#### Facilities, general.

In the indoor portion of the facility a young rabbit had escaped the rabbit enclosure and was wandering in the shared area of the inner room. Animals that escape the safety of their enclosure are at risk of injury or illness. Enclosures must be of sturdy construction, maintained in good repair, and must safely contain the animals. The facility must ensure that the rabbits can be kept in their designated enclosure.

### 3.131(d)

#### Sanitation.

There appears to be a lack of adequate pest control procedures at the facility. Large numbers of flies were observed around the inside hedgehog enclosure and the outside serval enclosure. In the food storage area, there was a trash can full of waste with no lid. There were numerous flies on and around this trash can and utensils being used to prepare food. There were multiple trash cans located throughout the facility without lids. Open trash cans are an attractant to flies and pests, and improper storage of waste can result in pest infestation and disease hazards. The licensee must create and maintain an effective program for the control of pests to promote the health and comfort of the animals.

To be corrected by 11-4-2024.

This inspection and exit interview were conducted with a facility representative.

Additional Inspectors:

MICHAEL TYGART, VETERINARY MEDICAL OFFICER
