CLAWS N PAWS WILD ANIMAL PARK INC

Type: ROUTINE INSPECTION

Date: 25-MAY-2017

### 2.40(b)(2)

### REPEAT

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The following animals are in need of additional veterinary care:

\*\*\*At least 1 of the 3 sika deer have excessively long hooves on the front feet. This animal is also limping, favoring the right rear. Another animal seems to have stiff joints in the front. All of these animals are receiving treatment for chronic joint pain; however, the long hooves can offset the natural positioning and balance of the limbs and may be contributing to the gait abnormalities noted in these animals.

\*\*\* Two coati have excessive hair loss, red and mottled skin, a thickened appearance to the skin, and were observed itching their skin. The most recent veterinary record documenting this condition is January 2016. Since that time, they have been treated according to the veterinarian's instructions; however, the treatments that these animals are currently receiving does not appear to be alleviating the condition, and further investigation is warranted to diagnose the underlying cause or find alternative treatments to improve symptoms for these animals.

The licensee must ensure all animals are receiving appropriate veterinary care, including methods to diagnose, treat, and prevent diseases and injuries. These animals must be examined by the veterinarian and treated accordingly.

This inspection and exit interview were conducted with the vice president.
