Type: ROUTINE INSPECTION
Date: 24-MAY-2017

2.40(a)(1)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The current written program of veterinary care (PVC) is incomplete for the cats and kittens. The cats or kittens are not listed in the program. A preventative program needs to be established for the cats and kittens to include vaccinations, parasite control, emergency care, and euthanasia. The PVC must be complete so that animals housed at the facility receive adequate veterinary care to protect their health and well-being.

3.1(e)

HOUSING FACILITIES, GENERAL.

Storage. There are open bags of food and bedding in the basement and bags of food and bedding stacked on the floor. All supplies of food and bedding must be properly stored in a manner that protect supplies from spoilage, contamination, and pests. All the open food and bedding must be kept in leakproof containers with tightly fitting lids to protect supplies from spoilage or contamination. The unopened food and bedding must be stored off the floor and away from walls to allow cleaning around and under supplies.

3.53(c)(1)

PRIMARY ENCLOSURES.

There is a Flemish giant rabbit housed in an 14.5 inch high enclosure which does not allow the animal to hold her head up in a normal manner. Rabbit enclosures must be constructed and maintained so as to provide sufficient space for the animal to make normal postural adjustments with adequate freedom of movement. The Flemish giant rabbit must be provided with a larger enclosure that provides the animal with adequate head height so she can make normal postural adjustments without touching the top of the enclosure.

This inspection was conducted at the new site. No regulated activities can be conducted until this site passes inspection.

This inspection and exit interview were conducted with the owner.
