Certificate: **74-C-0220**

Site: 001

Old Mac Donalds Farm Inc.

Type: ROUTINE INSPECTION

Date: 26-MAY-2021

---

### 2.75(b)(1)

#### Records: Dealers and exhibitors.

There were no records on site to be inspected and reviewed at this time. Records must be maintained and made available for review to ensure compliance and that the animals are being cared for adequately. Correct by June 5th.

### 3.53(a)(1)

#### Primary enclosures.

There are a total of 4 outdoor rabbit hutches that are in disrepair where: the empty hutch that is the farthest to the right, has a hole measuring approximately 2-3 inches in diameter in the bottom; the hutch that is third from the left, has 1 adult rabbit with a hole measuring approximately 1.5-2 inches in diameter along the left front bottom corner; the first hutch from the left houses 1 adult rabbit and 2 baby rabbits (kittens), where the aluminum bowl containing fresh food, has cuts and 2 chew holes (measuring approximately 0.5-1 inch and 0.75-1 inch in diameter). All 4 of the enclosures have areas where the parts of the enclosure that is connected to the wood is rusted and deteriorating. Enclosures that are not kept in good repair can lead to escape, injury and/or death of the animals contained in them. All 4 primary enclosures need to be repaired or replaced to ensure the safety and well-being of the rabbits. Correct by June 5th.

## Inspection Report

---

There are approximately five goats in an enclosure that has a rusted metal back wall panel with deteriorated holes varying in size and a rusted bottom exposing sharp edges which the animals have direct contact with. In the same enclosure there is a sheet of wood measuring approximately 12 x 16 inches, drooping down on one side with an exposed nail head, directly above the enclosure. There is a pen with three adult goats where there is an approximate 3-4 inch vertical, and 5-6 inch horizontal, break in the bottom of the fence near their shelter, with protruding sharp pointed edges. The entire length of the back of the enclosure housing 3 sheep has a break in the fence, near their shelter, which exposes sharp and rusted points of the fence. The back enclosure housing approximately 4 goats has a fence that is somewhat loose and rolling inward at the bottom all around the enclosure, where it is worse both in the front and rear of the enclosure.

Enclosures that are not kept in good repair can lead to the escape, injury and/or death of the animals, as well as entry of outside animals. Repairs to all of the enclosures must be made to ensure the safety and wellbeing of the animals housed within them. Correct by June 5th.

### 3.129(a)

#### Feeding.

There are approximately eight fallow deer and one goat in a fenced pasture where their only source of fresh hay is placed on a muddy ground without a receptacle. The mud is a potential source of contamination for the hay. Food that is not prevented from contamination could lead to illness and distress. Any food provided to the animals shall be free from contamination. Correct by June 2.

This inspection and exit interview were conducted with a facility representative.
