Type: ROUTINE INSPECTION
Date: 24-AUG-2017

3.31(c)

SANITATION.

The guinea pig enclosure had several gnats/fruit flies around it. The gnats/fruit flies were concentrated within the enclosure and on the enclosure wire. A single sticky fly trap was hanging from the ceiling in the room, however; the trap was ineffective because it was full of flies. Flies can carry and spread disease.

Implement and maintain provisions to effectively control the gnat and fruit fly population.

To be corrected: 8-28-17

3.125(a)

FACILITIES, GENERAL.

In the goat enclosure, the lower right corner of the storm door has been severely damaged and is partially gone. The storm door, which acts as a secondary door to the enclosure, has broken edges that could injure the goats. Finally, several pieces of plastic were scattered throughout the enclosure. These pieces could be ingested by animals and make them ill.

Repair, replace, or remove the storm door and remove the plastic pieces within the enclosure.

To be corrected: 9-1-17

This inspection and exit interview were conducted with the owner.
