Certificate: **35-C-0145**  
Site: 001  
CRISTO REY RANCH, INC.

Type: ROUTINE INSPECTION  
Date: 04-AUG-2021

---

### 3.75(a)

#### Housing facilities, general.

Wire mesh fencing on the door frame and entry door to the enclosure housing 4 ring-tailed lemurs was observed to have sharp points. The sharp points extend the entire length of the door and framing and are accessible to the lemurs.

Enclosures that are not properly maintained can cause injury to the animals. Enclosures must be kept in good repair so that they are structurally sound and free from sharp points and loose wires.

Correct By: August 18, 2021

### 3.127(d)

#### Facilities, outdoor.

There is no perimeter fence around the enclosure housing 3 Patagonian caviars. The facility had a perimeter fence variance for the caviars. However, the enclosure was relocated, and the perimeter fence variance no longer applies. Lack of a perimeter fence does not protect the animals by restricting unwanted animals and unauthorized persons from having contact with the animals. Also, without a perimeter fence there is no secondary containment system. A perimeter fence must be provided for this enclosure to keep unauthorized people and unwanted animals from coming in contact with the caviars and provide a secondary containment system in the event of an escape.
