Certificate: 64-C-0141
Site: 001
WILLIAM KEITH ALLEN

Type: ROUTINE INSPECTION
Date: 14-NOV-2019

2.75(b)(1) REPEAT

RECORDS: DEALERS AND EXHIBITORS.

There were incomplete records of acquisition and disposition.

Complete records of the animals currently being housed including their acquisition and disposition is necessary in order to accurately track animals to ensure humane care and use of the animals.

Exhibitors must make, keep, and maintain records which fully and correctly disclose information concerning animals purchased or otherwise acquired, owned, held, leased, or otherwise in his or her possession or under his or her control, or which is transported, sold, euthanized, or otherwise disposed of by that dealer or exhibitor.

2.131(c)(1) REPEAT

HANDLING OF ANIMALS.

The enclosure housing the single lemur did not have a public barrier to prevent contact with the animal. The wire mesh of the enclosure is large enough that people could stick fingers or objects through the mesh. The lemur was observed sticking his fingers through the wire. There was an area of the mesh where there was a larger opening, which the licensee stated was to facilitate feeding treats to the lemur.

Unauthorized contact poses a possible risk of injury to both members of the public and the lemur.

The facility must handle animals so there is minimal risk of harm to the animal and to the public, with sufficient distance and/or barriers between the animal and the general viewing public so as to assure the safety of animals and the public.

3.127(b) REPEAT

FACILITIES, OUTDOOR.

The camel enclosure, which contained one camel, did not provide any natural or artificial shelter from inclement weather. Shelter from inclement weather is necessary to provide protection and comfort for the animal. The facility shall provide natural or artificial shelter from inclement weather.

Inspection Report

3.127(d)

FACILITIES, OUTDOOR.

The fence at the perimeter of the property adjacent to the road and containing the exotic hoofstock was not continuous, was not structurally sound, and was not 6 feet tall in all areas. The perimeter fence was falling down in some areas. There were multiple gaps between where different fencing materials came together.

Perimeter fencing prevents unauthorized entry of people and animals. Animal injury may result from poor fencing or from attempts of the animals to escape through damaged fencing or subsequent to their escape.

Correct by: January 1, 2020.

This inspection and exit interview were conducted with the facility owner.
