

Inspection Report

Worms Wiggle In LLC
3541 NW 34th Pl
Gainesville, FL 32605

Customer ID: **6010848**
Certificate: **58-B-0696**
Site: 001
Worms Wiggle In LLC

Type: ROUTINE INSPECTION
Date: 03-OCT-2023

2.1(b)(2)(i)

Requirements and application

The facility has exceeded the maximum number of animals allowed under their license. The facility is approved for up to 100 animals but 179 animals were documented during the inspection.

The USDA license authorizes a specific number of animals to ensure that the facility and personnel possess adequate facilities, employees and education to provide sufficient husbandry to the regulated animals. A licensee must obtain a new license before any change resulting in more than the authorized number of animals on hand at any single point in time during the period of licensure. The licensee must reapply for a license that properly reflects the number of regulated animals under the license or reduce the number of regulated animals to a number which is under the maximum threshold authorized under the current license.

To be corrected by November 3, 2023.

2.126(a)(2)

Access and inspection of records and property; submission of itineraries.

Records of dispositions and animal inventory were not available for review at the time of inspection.

Failure to provide these documents hinders APHIS officials from tracking animals used in regulated activities to ensure their humane care, use, and disposition. The licensee must allow APHIS officials to examine records required to be kept by the AWA.

To be corrected by October 20, 2023.

3.131(c)

Sanitation.

The main show room of the facility has accumulations of bins and other objects crowding the space that prevents adequate cleaning. The floor has accumulations of old bedding material and other debris scattered around.

06-OCT-2023

Inspection Report

These accumulations can attract insect and mammalian pests and pose disease hazards to the regulated animals. The premises shall be kept clean and in good repair to facilitate the proper husbandry of the regulated animals.

To be corrected by October 25, 2023.

3.133

Repeat

Separation.

There are two different enclosures, each housing 11 spiny mice, that contain animals with injuries. Several mice have reddened or scabbed areas on their tails as well as some that have injuries on their backs.

Housing animals at too high a density can cause compatibility issues. Housing incompatible animals together can lead to injury or even death. The facility must ensure that animals housed together are compatible.

This inspection and exit interview were conducted with a facility representative.
