3.125(a)

FACILITIES, GENERAL.

In the fox enclosure; on the southeast corner under the den structure, the foxes dug a hole and escaped the primary enclosure. Both of the foxes have been safely captured.

The primary enclosure must be structurally sound to contain the animals, so the animals do not escape and become injured, or deceased. All facility enclosures must be maintained in an appropriate state to contain the animals securely and a system of maintenance must be implemented to ensure this does not reoccur.

To be corrected by: June 11, 2014

An exit interview was conducted with a facility representative.
