Certificate: **92-B-0230**
Site: 003
ZANY ZOO PETS, L L C

Type: ROUTINE INSPECTION
Date: 10-SEP-2015

3.125(c)

FACILITIES, GENERAL.

The back room storage area had eight open bags of various food materials. Open bags of food and bedding must be kept in closed contains to protect them from deterioration, mold or contamination by pest. A regular program of placing open bags of food or bedding in closed containers needs to be started and maintained.

Correct by: Sept. 14, 2015

3.131(a)

SANITATION.

The cage housing the coati was in need of cleaning. There was old food materials, dried fecal matter, and bedding on the floor of the enclosure. There was enough vertical space, structures (platforms, benches, and branches), that the coati was not in contact with the floor of the cage.

The cage housing the bushbaby in the boarding area of the store was in need of cleaning. The trays beneath the wire flooring were full of old bedding, food materials, and moisture. The bushbaby was not in direct contact with the trays.

Cages need to be cleaned as often as necessary to prevent contamination of the animals, minimize disease, and to reduce odors. There needs to be a regular cleaning schedule in place to maintain clean cages for all the animals in the store.

Correct by Sept, 11, 2015

Inspection Report

SANITATION.

The floor of the boarding area in the store was covered with old wood shavings around, beneath, and in front of the animal cages. It appears that the cages had been cleaned but the floor had not been swept and old bedding removed from the area. The area was also cluttered with open bags containing bedding and dry food, and cleaning equipment. The floor in this area needs to be swept and clutter removed to facilitate a clean area for the animals, reduce odor, and eliminate areas for pest to hide. A regular program of cleaning and sweeping the floor and elimination of materials that are not needed in the area to reduce clutter needs to be in place and maintained.

Correct by: Sept, 12, 2015

3.133

SEPARATION.

There was an enclosure in the boarding area of the store that housed several degu. One animal appeared to have small areas of hair missing around the ears and top of head. These areas looked like potential bites indicating fighting.

There were no open wounds or cuts. Store personnel had seen some aggressive behavior but was not aware of the bite areas. It was asked that the animal with the bite areas on the head be placed in a separate enclosure and this was done at the time of this inspection.

Animals housed together must be compatible to reduce the risk of fighting which may result in injury and undue stress on the animals housed together.

Animals housed in groups need to be observed daily for any signs of over aggression and if such behavior is noticed animals must be separated to protect them from each other.

Correct by: Animal was separated from group at time of inspection.
