Type: ROUTINE INSPECTION
Date: 03-MAR-2014

2.40(b)(3)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

One aged breeder was found dead at the time of inspection and one litter of newborns had died. These issues appeared confined to two enclosures but were not recorded or relayed to the attending veterinarian. The animals need to be monitored daily and recorded to assure early identification of adverse trends which may then be conveyed to the attending veterinarian. This assures the continued health and wellbeing of the animals. Correct: this point forward.

3.28(a)(1)

PRIMARY ENCLOSURES.

Two enclosures holding eight breeders each, had metal edges that were rusted and presented sharp edges. Two other enclosures were noted to have wire that had rusted to the point that it presented sharp edges. These items need to be corrected to assure the animals do not become injured. Correct By: 14 March 2014

Exit interview conducted with facility representative.

Prepared By: DAVID OELBERG, D V M USDA, APHIS, Animal Care
