

Inspection Report

Antech Inc.
7330 Ridgefield Dr
Barnhart, MO 63012

Customer ID: **6132**
Certificate: **43-A-2556**
Site: 002
ANTECH INC

Type: ROUTINE INSPECTION
Date: 19-FEB-2014

3.1(c)(1)(1)

HOUSING FACILITIES, GENERAL.

In Building 9, the sides of an enclosure with two adult hound dogs were made of wire and were rusted to the point that they were severely pitted. Excessive rust does not allow for proper cleaning and sanitization and can result in unstable enclosures. The licensee must ensure that any surfaces that come in contact with the dogs are free of excessive rust.

To be corrected by February 28, 2014.

3.1(c)(3)

HOUSING FACILITIES, GENERAL.

The concrete floors inside most of the buildings had a layer of a yellowish-brown algae-like substance on them. The facility representative stated that bleach is the method of sanitization used. However, when questioned further, it became apparent that the facility was using a bleach solution that was only about half the strength recommended by the bleach manufacturer. Improper sanitization methods will not provide proper disinfection and will not destroy microorganisms that can be harmful to the health of the animals. The licensee must ensure that a proper sanitization method is used to reduce disease hazards on all hard surfaces.

To be corrected by February 20, 2014.

The inspection and the exit briefing were conducted with the licensee and with a facility representative.

Additional Inspectors

Heine William, Animal Care Inspector
Mcgruder William, Animal Care Inspector

Prepared By: KONNIE PLUMLEE, D V M USDA, APHIS, Animal Care
