Type: ROUTINE INSPECTION
Date: 01-MAR-2016

2.40(b)(2) DIRECT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

- A nine year old black, male Shih Tzu named Calvin (ID# TR 67688805) had several abrasions/lesions covering one or more of his legs, most noticeably his right rear leg. He also had a severe ear infection. His right ear was severely swollen, reddened and had puss/discharge inside the canal of the ear. The infection could be caused by parasites, yeast, or bacteria. Ear infections can be painful causing discomfort and could lead to health problems for that dog. If left untreated ear infections could lead to continued health issues, tissue damage or inflammation of the ear canal. He also had a moist dermatitis on his head with bruising. The lesion area was approximately an inch in diameter, was circular in shape, reddened with dark spots, moist looking and was hairless. The licensee stated that she hadn't noticed the problems with this dog and thought the injuries might have been caused from a fight. The licensee immediately contacted the attending veterinarian and began treating the ear and cleaning the dog. The licensee must have this dog evaluated and examined by the attending veterinarian and the appropriate treatment must be administered and documented. The licensee must provide adequate veterinary care to all animals at all times.

To be corrected by: 3/3/2016.

3.11(a)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

- There was a heavy accumulation of feces in the outdoor portions of multiple enclosures containing approximately twenty dogs. Some of the fecal material appeared fresh, but much of it was dry and white in color. The licensee stated that the part time employee had starting cleaning the day before and then had an emergency and had to leave so the cleaning was left unfinished. The feces had been scraped into large piles toward the ends of the enclosures. The excreta must be removed from primary enclosures daily to prevent an excessive accumulation so as not to soil the dogs contained therein and to reduce disease hazards, insects, pests, and odors.
