QUIVER FARM PROJECTS INC

Type: ROUTINE INSPECTION
Date: 02-OCT-2019

3.56(b)(1)

SANITATION.

While inspecting the rabbit enclosures, the owner stated that the rabbit feeders were sanitized once every two weeks but the primary enclosures themselves were sanitized quarterly.

Primary enclosures for rabbits need to be sanitized at least once every thirty days. Failure to do so can lead to increased spread of disease. Correct by sanitizing the enclosures at least once every thirty days by using one of the following methods:

- Washing with hot water (180 degrees) AND soap or detergent
- Washing all soiled surfaces with a detergent solution followed by a safe and effective disinfectant
- Cleaning all soiled surfaces with live steam or flame

Correct by October 31, 2019.

3.56(c)

SANITATION.

On the windows and rafters above the enclosures of the four rabbits, there is an excessive accumulation of dust and spiderwebs.

Premises, including building and grounds, need to be kept clean and in good repair. Failure to do so can negatively impact the rabbits by potentially contaminating their feed or inhibiting ventilation. Correct by cleaning and maintaining the areas surrounding the rabbit hutches. Correct by October 9, 2019.

3.131(c)

SANITATION.

Inspection Report

There is an excessive build-up of spiderwebs, dust, and straw in three corners of the enclosure of the pig. These areas of debris accumulation span approximately 2ftx3ft at a height of about 2ft above ground-level.

Premises, including enclosures, need to be kept clean in order to protect the animal from injury or disease. These accumulations of spiderwebs and dust can have a negative impact on the health of the animal by potentially contaminating food, water, or by inhibiting proper ventilation. Correct by cleaning the enclosures and maintaining them in good repair. Correct by October 9, 2019.

This inspection and exit interview were conducted with the facility owner.
