Certificate: **31-B-0220**  
Site: 001  
A&R's Exotics

Type: ROUTINE INSPECTION  
Date: 03-MAY-2023

---

### **2.1(b)(2)(i) Critical** **Requirements and application**

The licensee is currently conducting regulated activity but has exceeded the maximum number of animals allowed under their license. Licenses issued under the Animal Welfare Act (AWA) are issued for a specific number of animals. This licensee is authorized for a maximum number of 50 animals but currently is housing 58 regulated animals, making the current license invalid. The birth of 11 skunk kits on 02-May-2023 caused the facility to exceed the maximum number of animals authorized for the facility. There are several other animals at the facility that are currently bred and expected to give birth shortly including: 3 striped skunk and 8 ferrets. In addition, there are 5 female sugar gliders and 1 female chinchilla that may be bred since they are housed in pairs. Licensees demonstrate compliance with the AWA during their pre-license inspection and those licenses are issued based on the numbers and types of animals at that time. Significant increases in animals can exceed the capacity of the facility to ensure adequate care is provided to the animals. Licensees are required to reapply and obtain a new license before any change that results in more than the authorized number of animals. Correct by applying for and obtaining a new license before any additional regulated activity can occur or by reducing the number of animals at the facility below the maximum authorized number under the current license. Regulated activities must be discontinued until a valid active license is in place. Correct by 04-May-2023.

This inspection and exit interview were conducted with the Licensee.
