Type: ROUTINE INSPECTION
Date: 13-FEB-2025

3.153(a)(1)(iii)

Primary enclosures.

On 13FEB2025 four Orange Cheek waxbills and one ground dove were out of their primary enclosures and were perched above their enclosure or on the ground in proximity to the bank of cages. The facility representative said the birds escaped when an employee entered the enclosures. Escaped birds are at risk of injury and could potentially get out of the facility altogether. All enclosures must safely contain the birds, and precautions should be taken when opening the door to the birds' primary enclosures to prevent escapes.
Correct from 13 February 2025 onward.

3.158(a)(1)

Cleaning, sanitization, housekeeping, and pest control.

There is an excessive amount of excreta in the finch group, diamond dove group and pigeon group enclosures. The floors of the enclosures are primarily covered with pine shavings and removed and replaced on a routine basis. There is significant build up of bird waste material on the floors, perches and enrichment items. Excessive excreta and food waste in primary enclosures can soil the birds, increase disease hazards, and attract pests into the enclosure. Remove excreta and food waste from primary enclosures and from under and around primary enclosures as often as necessary to prevent excessive accumulation. Correct by 28 February 2025.

This inspection and exit interview were conducted with the facility representative.
