COMPARATIVE MEDICINE

Type: ROUTINE INSPECTION  
Date: 12-AUG-2025

---

### 2.33(b)(2)

#### Attending veterinarian and adequate veterinary care.

On 2/3/25 veterinary staff administered the anesthetic drug ketamine to one non-human primate for a routine veterinary care procedure. The anesthetic administered was 3 days beyond the label expiration date of 1/31/25. According to the animal's record and veterinary staff, the animal was adequately anesthetized during the procedure and did not experience any harmful effects from the administration of the ketamine.

Per this Section, each research facility shall establish and maintain programs of adequate veterinary care that include the use of appropriate methods to prevent, control, diagnose, and treat diseases or injuries. The use of medications that are past the manufacturer's expiration date is not considered providing adequate veterinary care. This incident was self-reported to OLAW and the research facility addressed this incident prior to the inspection by modifying the handling and monitoring of controlled substances to identify any medications that are approaching near-term expiration dates to ensure they are not used past their expiration date. No additional incidents have occurred. To remain corrected from this date 8/12/25 forward.

This inspection and exit briefing were conducted with facility representatives.
