Coastal Exotics

Type: ROUTINE INSPECTION
Date: 30-NOV-2021

2.40(a)(1)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

The licensee stated July 8, 2021 that he was employing a new attending veterinarian and was having him complete a program of veterinary care. Upon review of the PVC on hand there was only a reference guide in place that had not been approved for use by the AV. Also the written PVC for the new AV had not been completed by the time of the inspection. The attending veterinarian needs to have a formal arrangement in place to illustrate that adequate veterinary care will be provided to the animals at the facility. The AV shall have a written program of veterinary care and regularly scheduled visits to the facility for their health and well-being. Correct by December 14, 2021.

2.40(b)(3)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

There was a male coatimundi that was being used for breeding and was injured by the female. The licensee stated that it was normal to see some level of roughness displayed during the breeding process but the injury observed was more than minor cuts. Per the attending veterinarian, the male coatimundi, which previously had his penile sheath repaired, was not a good candidate for breeding. The AV was unaware that the licensee was intending to use the male for breeding purposes. Although the licensee discussed separating the animal and taking him off of the breeding program as a corrective measure, there wasn't a clear line of communication about the health and use of the animals with the attending

Inspection Report

veterinarian. The communication between licensee and AV must be direct and frequent to ensure the proper use of the animals so that they are being utilized in the safest and most appropriate manner. The licensee shall exercise a mechanism of direct and frequent communication so that timely and accurate information on problems of health, behavior, and well-being of the animals is conveyed to the attending veterinarian. Correct from this day forward.

3.125(a)

Facilities, general.

The kinkajou's den box inside their primary enclosure had a missing leg and exposed nails. The exposed nails could potentially injure the animals and the missing leg could compromise the stability of the structure which could fall over. The housing facility shall be structurally sound and in good repair to protect the animals from injury. Correct by December 7, 2021

3.131(c)

Sanitation.

The pond in the capybaras enclosure had several pieces of a broken floating platform, a tire and some discarded trash. Trash, discarded items and debris in the enclosure could potentially cause injury to the animals. The animals grounds shall be kept clean, in good repair and void of accumulated trash to protect the health of the animals. Correct by December 7, 2021

3.133

Direct

Repeat

Separation.

There was a male coatimundi that had cuts and scratch marks on the left side of its face and on his left paw. The facial wound was about an inch long in front of the left eye extending behind the left to the cheek area. It was red and wet in appearance with debris attached to it. the wound on the left paw was also wet in appearance on top of the 3rd digit. Per the licensee, he was housed in the female's cage for breeding purposes and the female attacked him. Housing
