WATERING.

3.130 Watering

There are two beavers housed in an enclosure without a fresh water source. These animals do have access to a pool that is duped, cleaned and re-filled with fresh water once a week. Having fresh and potable water on a daily basis decreases the risk of illness or disease. Fresh water needs to be provided to all animals on a daily basis as a minimum. Water may need to be provided more often if necessary for the health and comfort of the animals.

Correct By: Correct at time of inspection
