EXOTIC ANIMAL EXHIBITS

Type: ROUTINE INSPECTION

Date: 10-DEC-2021

---

### 2.40(b)(3)

#### Attending veterinarian and adequate veterinary care (dealers and exhibitors).

The zebra had a crusted, superficial laceration approximately 2 - 2.5 inches long on its left rear thigh. The person accompanying the inspector indicated that the wound had been noted the day prior but no communication with the Attending Veterinarian had been made and no care to the injury had been performed. Not conducting daily observations and or communicating findings with the AV could result in inadequate medical care for animals and have significant negative impacts on the health of the animals. Per the regulations, daily observation of all animals to assess their health and well-being; Provided, however, That daily observation of animals may be accomplished by someone other than the attending veterinarian; and Provided, further, That a mechanism of direct and frequent communication is required so that timely and accurate information on problems of animal health, behavior, and well-being is conveyed to the attending veterinarian. Correct by 12December2021.

### 2.131(c)(1)

#### Handling of animals.

The following animal enclosures were not secured and/or locked to prevent unattended patrons from entering the enclosures: ringtail lemurs, serval, kinkajou, sloth, fox, coati, porcupine, wolves, goats, pigs, hedgehog, rabbit. Not supervising patrons who could directly access the animal enclosures puts both the patrons and the animals at risk of

## Inspection Report

---

injury. Per the regulation, during public exhibition, any animal must be handled so there is minimal risk of harm to the animal and to the public, with sufficient barriers between the animal and the general viewing public so as to assure the safety of animals and the public. Correct by 11Dec2021.

### 2.131(d)(2)

### Repeat

#### Handling of animals.

At least seven groups of patrons were observed interacting with animals with no identifiable attendant present. Most concerning was the presence of a patron inside the lemur housing area between the barrier door and enclosure door – neither of which were secure and no attendant was present. Patrons were also observed in the kinkajou and sloth areas with no attendant present and unsecured/unlocked enclosure doors. Not supervising patrons who can directly access the animal enclosures puts both the patrons and the animals at risk of injury. Per the regulations, a responsible, knowledgeable, and readily identifiable employee or attendant must be present at all times during periods of public contact.

This inspection and exit interview were conducted with the facility representative.
