

## Inspection Report

Connie Braun Casey  
12338 Hwy C C  
Festus, MO 63028

Customer ID: **321991**  
Certificate: **43-C-0315**  
Site: 001  
CONNIE BRAUN CASEY

Type: ROUTINE INSPECTION  
Date: 05-JAN-2016

---

### 3.75(c)(3) REPEAT

#### HOUSING FACILITIES, GENERAL.

Surfaces. Cleaning.

\* There were various items inside some of the enclosures that were soiled and had clearly not been sanitized within the past two weeks. One was a white and blue rope inside the enclosure housing two lemurs which had turned completely black and grimy in some areas. Another was a black and white rope inside the enclosure housing one capuchin which was soiled with a black, grimy substance. The baboon enclosure had a swinging hammock which was also soiled black around the edges.

\* The licensee stated the waste is only being removed from the enclosures every other day. There was clearly more than one days' worth of food waste and excreta on the floors at the time of inspection in nearly all the enclosures.

\* The empty enclosure next to the lemurs is used to care for cats (litter box and feeding). There was a build-up of waste debris along the edges of that enclosure which were in very close proximity to the lemurs.

\*\* Enrichment items, enclosures, and areas in and around enclosures which are not kept properly cleaned and sanitized are likely to attract pests and vermin which pose a health risk for the animals.

\*\*\* The licensee must ensure that hard surfaces which nonhuman primates come in contact with are spot cleaned daily and sanitized in accordance with 3.84 (at least once every two weeks). Furthermore, the licensee must ensure that all other surfaces of housing facilities are cleaned and sanitized when necessary to satisfy generally accepted husbandry standards and practices.

### 3.84(d)

#### CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

Pest Control.

## Inspection Report

---

\* There were numerous cockroaches observed during the inspection throughout most of the facility--both in and outside of animal enclosures. An excessive amount (too many to count) were observed along the top bar of the lemur enclosure. The licensee has been using an exterminator service on a monthly basis for over a year in an attempt to get the pest problem under control. There were numerous dead cockroaches throughout the facility and the licensee stated they are dying often enough that she has to sweep twice daily. While the pest control program seems to be eradicating numerous cockroaches, there were still too many live ones in the facility for the program to be considered effective.

\*\* Cockroaches can easily transmit harmful pathogens and pose a health risk for the animals.

\*\*\* The licensee must ensure that an effective pest control program is established and maintained to promote the health and well-being of the animals and reduce contamination by pests in animal areas. TO BE CORRECTED BY:  
15 April 2016

The inspection and an exit interview were conducted by Dr. Amanda Owens (VMO), Mr. Bill Heine (ACI), and the licensee.

### Additional Inspectors

Heine William, Animal Care Inspector
