WILLIAM MEADOWS

Type: ROUTINE INSPECTION
Date: 14-MAR-2024

2.40(a)(1)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

The facility was only able to find the contact page for the program of veterinary care. There was no information pertaining to the animals. A written program of veterinary care is required so that USDA officials can ensure guidance from the attending veterinarian is being followed and communication with the attending veterinarian is occurring. A current Program of Veterinary Care with information pertaining to the animals needs to be available for review during inspections.

Correct by: April 1, 2024

2.40(b)(3)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

In an enclosure housing five fallow deer, two of them had several patches of hair missing on the sides of their bodies. The patches were roughly 2-3 inches across and 2-3 inches in width. The licensee hadn't noticed the hair loss prior to the inspectors bringing it to his attention. The attending veterinarian hadn't been consulted and a diagnosis or cause of the hair loss was not provided at the time of the inspection. Daily observation of all animals to assess their health and well-being is imperative. The licensee must also have direct and frequent communication with the attending veterinarian so that any problems with animal health, behavior, and well-being are addressed in a timely manner.

Correct by: April 1, 2024.

3.128

Repeat

Space requirements.

At the time of this inspection a singly housed serval was observed pacing back and forth along one side of its enclosure. The enclosure was approximately 4' x 12'. There were a couple of small shelter areas for the animal to get out of the weather, however there were no climbing structures or resting platforms in the enclosure. Other than a food and water bowl, there was nothing in the enclosure. These cats are agile jumpers and live solitary lives roaming several miles daily in the wild.

Enclosures shall be constructed and maintained so as to provide sufficient space to allow each animal to make normal postural and social adjustments with adequate freedom of movement. Inadequate space may be indicated by evidence of malnutrition, poor condition, debility, stress, or abnormal behavior patterns.

The current enclosure is inadequate for the serval as evidenced by the repeated pacing (abnormal) behavior. This enclosure needs to be addressed to meet the physical and psychological welfare of the serval.

Inspection Report

3.129(a)

Feeding.

In an enclosure housing five fallow deer, there was a very poor-quality round bale of hay in the enclosure for them to eat which isn't providing them with a nutritious, palatable source of roughage. The hay appears to be old, dusty, brown and of general poor quality. The fallow deer were near the hay but were disinterested. Food that is contaminated or unwholesome can be detrimental to the health and well-being of the animal. The facility shall provide food and/or hay that is wholesome, palatable and free from contamination and of sufficient quantity and nutritive value to maintain all animals in good health at all times. Quality hay also provides environmental enrichment for forage-based diet animals.

Correct by: April 1, 2024.

3.154

Environment enhancement to promote psychological well-being.

No bird enrichment form or documentation was available at the time of the inspection. The facility was unable to provide the inspector with a written plan for environmental enhancement. Facilities that house birds must develop, document, and follow a species-appropriate plan for environment enhancement adequate to promote the psychological well-being of birds. The plan must be in accordance with the currently accepted professional standards as cited in appropriate professional journals or reference guides, and as directed by the attending veterinarian. This plan must be made available to APHIS upon request. At the time of inspection, an environmental enhancement plan for birds that documents the appropriate provisions to provide enrichment and special considerations and is approved by the attending veterinarian had not been developed by the facility. This plan is necessary to ensure the psychological well-being and health of the animals. The facility must ensure that a documented plan for environmental enhancement that addresses the required elements approved by the attending veterinarian is maintained and available for inspection.

Correct by: April 1, 2024

This inspection and exit interview were conducted with the facility representative.
