2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

2.40 (b) 2

Multiple containers of expired medications were found during inspection in the grooming/wash/treatment area. These were intermingled on a shelf with pharmaceuticals in current use. Expired medications found included: Baytril Injectable (Exp Jan 2007), Animax Cream (Exp April 2010), Metronidazole 250 mg (Exp April 2016), Clavamox (Exp June 2015), Albon (Exp Nov 2016) and Vetricin (Exp August 2011).

Expired medications can have unpredictable effects and should not be used on regulated animal species. Expired medications should be labelled as expired and segregated from non-expired medication until appropriately disposed of. Furthermore, the licensee must ensure that all medications in current use on regulated species are not expired and labeled properly in accordance with standard veterinary practices.

Medical documentation was provided by the licensee for four cats cited by a previous USDA inspector under 2.40 (b) (2) on 14- Dec-2016. Documentation provided showed these cats were subsequently evaluated by a veterinarian and treated accordingly. The program of veterinary care was also updated by the attending veterinarian to reflect concerns also outlined in that report.

3.1(c)(3) REPEAT

HOUSING FACILITIES, GENERAL.

1) Multiple large areas containing dark and light colored spots of dried, splattered debris were observed during inspection on cabinet doors and vertical wall surfaces in the office area where animals are housed and where cats are allowed to freely feed and roam. Two spots of a cream-colored, moist mucous substance were additionally observed on the floor during the time of inspection. Twelve kittens, two adult cats were present and uncaged in the

Inspection Report

room at the time of inspection. In addition, there were 4 adult guinea pigs, 10 hamsters, 3 adult and 7 juvenile hedgehogs in the room. All of these were observed to be housed in appropriate caging within the room at the time of inspection.

2) Multiple large areas containing dark and light colored spots of dried, splattered debris were also observed on cabinet doors in the grooming/wash/treatment area where cats are also allowed to freely feed and roam.

Accumulations of waste, debris, animal exudate, dirt or grime on cabinets, floors and walls in animal areas may lead to the spread of pathogens to animals in those areas. Such accumulations may likewise attract unwanted vermin and insect pests. Surfaces of housing areas/animal rooms must be cleaned and sanitized as often as necessary to prevent accumulation of waste, debris, exudate, dirt or grime and to satisfy accepted husbandry standards.
