Type: ROUTINE INSPECTION

Date: 08-MAY-2024

---

### 3.80(a)(2)(iii) Critical

#### Primary enclosures.

On April 25, 2024, a 4-year-old male lemur escaped from his primary enclosure and was never recovered. According to the facility representative, the lemur was observed inside the enclosure the previous evening and they do not know how the primate escaped. Primary enclosures that do not securely contain the animal can lead to animal escapes, injuries, or death.

The facility must ensure that primary enclosures for nonhuman primates are designed and constructed so that they are structurally sound for the species of nonhuman primates housed in them. They must contain the nonhuman primates securely and prevent accidental opening of the enclosure, including opening by the animal. Correct from this date forward of May 9, 2024.

This inspection and exit interview were conducted with the licensee.
