Date: 30-JAN-2018

3.1(c)(3)

HOUSING FACILITIES, GENERAL.

Cleaning

In all of the outdoor enclosures, affecting approximately 64 dogs, there is an heavy accumulation of old bedding, hair, dirt, fecal material, and other organic material.

There is a heavy accumulation of this material around and underneath several of the shelters. Some of this material has been there long enough for rodents to make burrows and trails. In several of the enclosures there is some old bedding in front of around the shelters that has become soaked with urine and other liquids and has a very strong odor of urine.

In several of the inactive receptacle areas of the self feeders there is a heavy accumulation of what appears to be dirt, organic material and rodent droppings.

In an outdoor enclosure the majority of the floor was covered with fecal material and bedding. This amount of fecal material made it difficult for the dogs to move around the enclosure without stepping in it.

This accumulation of hair, dirt, old bedding fecal material, and other organic material has created a habitat for rodents to flourish and could become a disease hazard. The licensee must clean these enclosures and ensure that all enclosures are spot cleaned daily and sanitized at least once every two weeks to reduce disease hazards, eliminate odors, insects, pests, or vermin infestation. All other surfaces of housing facilities must be cleaned and sanitized when necessary to satisfy generally accepted husbandry standards and practices.

To be corrected: by 31 Jan 18

3.4(b)

OUTDOOR HOUSING FACILITIES.

Shelter Space

In an outdoor enclosure, housing 8 young Labrador Retrievers, there was one shelter provided. This shelter did not provide enough space for all of the dogs to sit, stand, lie down or turn around at the same time. The licensee must provide an additional shelter or move some of the dogs so that they all can perform the aforementioned postural movements and for the health and well being of the dogs.

It is noted that at the time of inspection the licensee moved 4 of the dogs to a different enclosure.

Inspection Report

3.6(c)(1)

PRIMARY ENCLOSURES.

Minimum Space Requirements

There are two Boston Terriers housed in an enclosure that does not provide them with enough floor space. The enclosure was measured at 30 inches x 30 inches which gives these dogs 6.25 sq. ft. of available floor space. Both dogs were measured to be approximately 17 inches in length. The minimum required floor space for these dogs is $(17+6)(17+6)/144 \times 2 = 7.35$ sq. ft. These two dogs do not have enough floor space. Adequate floor space is required in order to ensure that the animals can make normal postural adjustments and for their health and well-being. The licensee must provide these dogs with an enclosure with adequate space and ensure that each animal is provided with adequate floor space for the health and well-being of the animals at all times. The licensee did move one of the dogs after inspectors pointed it out during the inspection.

To be corrected by: 31 Jan 18

3.9(a) DIRECT

FEEDING.

Contaminated Food

Inside of a food reservoir area of a self feeder, affecting 4 dogs, the inspector found one live mouse and one dead mouse on top of the food. The licensee quickly removed both the live and dead mouse and disposed of them.

In at least 3 of the trough areas of self feeders, affecting 6 dogs, the inspectors found bird and rodent droppings.

Rodents, rodent and bird dropping can transmit disease to the dogs.

The food in these self feeders have become contaminated. The licensee must remove the remaining food from the affected self feeders, clean and sanitize these feeders.

The licensee must ensure that the food be uncontaminated at all times.

The licensee was verbally instructed to correct this issue by 31 Jan 18.

3.10 DIRECT

WATERING.

Access to Water

In all of the outdoor enclosures, affecting approximately 64 dogs, the water lick-its in the all of the enclosures were shut off due to cold temperatures. Dogs were observed licking and chewing the lick-its, inspector moved the lick-its to try and get water, and nothing or very little water was coming out. The licensee stated the water was shut off at 10 pm the night before. The inspector instructed the licensee to supply water to the dogs. After the licensee turned on the water all the dogs were trying to drink, many continuously for 30 seconds, and all the dogs were pushing and crowding to get to the lick-its.

At the time of inspection this placed the amount of time elapsed at approximately 14 hours since the dogs were

Inspection Report

offered fresh water.

Lack of water could cause the dogs to become dehydrated or succumb to other health issues. The licensee must provide and ensure that all dogs have access to fresh water twice a day for at least an hour each time, or more often if necessary to ensure the dogs do not become dehydrated or succumb to other potentially serious health issues.

To be corrected by: 31 Jan 18

3.11(d)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

Pest Control

The outdoor building had a heavy coating of what appeared to be bird droppings on the enclosure divider walls, affecting approximately 64 dogs. The dogs' self-feeders were directly below the area with the bird droppings, and self-feeders had bird droppings on them. Several mice were observed scurrying around in the enclosures. Birds, mice and bird droppings can transmit diseases and parasites to the dogs.

The licensee must establish and maintain a safe and effective pest control program to protect the health of the dogs and puppies.

To be corrected by: 1 Feb 18

Inspection conducted with licensee and a verbal instructions given for the directs to be corrected on 30 Jan 18. A formal exit interview was conducted with licensee on 31 Jan 18.
