Type: ROUTINE INSPECTION
Date: 02-NOV-2016

2.75(b)(1)

RECORDS: DEALERS AND EXHIBITORS.

Since the previous inspection report on March 22, 2016, there were no records of adult animals being sold. Owner stated during the inspection that she sells the older adult guinea pigs to dealer, but there were no records of any sale of the adult guinea pigs. Records must be maintained on the disposition of all animals to keep track of animals, document changes in ownership and document the sale of animals. Licensee must ensure that records on the disposition of animals are kept and maintained. Correct from this day forward.

3.26(d) REPEAT

FACILITIES, INDOOR.

There are still areas on the floor where the white finish is worn or scratched off and the unsealed particle board is present. The floor in the guinea pig room must be impervious to moisture so that the floor can be repeatedly cleaned and disinfected and will not retain odors. The floor must be repaired, sealed, or replaced where the white coating is worn or scratched off so that the floor can be repeatedly cleaned and sanitized. Remains uncorrected.

3.28(a)(1) REPEAT

PRIMARY ENCLOSURES.

The guinea pig enclosures still have severely chewed edges on the PVC pipe that surrounds the automatic water valves. The 72 enclosures currently in use have chewed edges on the PVC pipe that surrounds the water valve. The chewed edges could injure the guinea pig while it drinks and the chewed edges makes cleaning and sanitation more difficult. Improperly sanitized surfaces can expose the guinea pigs to potential infections with bacteria, fungi, and parasites. Primary enclosures including accessories shall be constructed of smooth materials, be structurally sound, and be maintained in good repair to prevent injury. Correct by replacing or repairing the chewed PVC pipes that surrounds the automatic water valve. Remains uncorrected.

Inspection Report

3.30

WATERING.

There were accumulations of dirt and debris by the automatic water valves and the PVC pipes around the water valves. The water pipes and drainage pipes have accumulations of debris, grime, and dust. These accumulations on the water valves and surrounding PVC pipes can expose the guinea pigs to potential infections with bacteria, fungi, and parasites. Inadequate cleaning and sanitation of the water valves and surrounding pipes can result in contamination and health problems of the guinea pig colony. Correct by keeping the water valves, water lines and PVC pipes clean to ensure the health and well-being of the guinea pigs. Correct by November 9, 2016.

3.31(a)(1)

SANITATION.

Cleaning and sanitation of primary enclosures. Guinea pig enclosures are not being cleaned adequately or often enough to remove accumulations of excreta, soiled bedding, dirt, debris and stains. There were accumulations of excreta, soiled bedding, dirt, urine stains, and grime on the sides and floors of enclosures. Ineffective cleaning and sanitation exposes the animals to disease hazards such as bacteria, fungal, and parasites. Primary enclosure must be cleaned often enough to prevent accumulations of excreta, soiled bedding, dirt, urine stains and grime. Enclosures must be sanitized at least once every 2 weeks. Correct by ensuring that all primary enclosures are kept clean and sanitized often enough to prevent accumulation of excreta and debris. Additionally, ensure that all primary enclosures are sanitized at least once every two weeks. Correct by November 9, 2016.

This inspection and exit interview were conducted with the owner.
