### 2.40(b)(2) DIRECT REPEAT

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The following dogs were cited under 2.40 (b)(2) on the inspection report dated June 06, 2016 and were not evaluated by a licensed veterinarian as required on the inspection report. The licensee did attempt to clean the teeth of these dogs (#84 and #78) on his own.

One adult, female, Yorkshire terrier ("Little Daisy", Tag #32, DOB 2008) has hair-loss on both ears. Nearly all of the hair is gone on both ears and both ears are moderately thickened and dark in color. There is dark scabs/crusting on the inside and outside of both ears.

One adult, female, Yorkshire terrier ("Fluffy", Tag #84) has hair-loss on both ears and had severe dental tartar. Nearly all of the hair was gone on both ears. Both ears were mildly thickened with dark scabs/crusting present on the surface of the skin. The severe dental tartar covered nearly all of the remaining front and cheek teeth. In some areas the gums were pulled back from the teeth and there was a creamy white discharge present along the gumline. One of the upper left front teeth was severely loose and moved when the dog stuck her tongue against the tooth. The licensee removed a significant amount of tartar from this dog's teeth himself.

One adult, female Yorkshire terrier (ID #78) has a buildup of a thick dark brown tartar encasing the entire surface of the cheek teeth and the majority of the upper canine tooth on the left side of the mouth. A light brown tartar was encasing the entire surface of the upper and lower cheek teeth and the majority of the upper canine tooth on the right side of the mouth. The gums are moderately reddened and a creamy white substance is located along the gum line of the upper left cheek teeth.

One adult, female, Maltese ("Dolly", Tag #82) had severe dental tartar. The severe dental tartar covered nearly all of the remaining cheek teeth and part of each front tooth and canine. The gums were severely red and swollen and in some areas the gums were pulled back from the teeth with a creamy white discharge present along the gumline. The inspectors observed this dog excessively licking. The licensee removed a significant amount of tartar from this dog's teeth himself.

Hair loss can be an indication of an underlying health problem. Poor dental health can cause pain and discomfort to

## Inspection Report

---

the dog and lead to further health complications. The licensee must have the above mentioned dogs evaluated by a licensed veterinarian for proper diagnosis and effective treatment plan. The diagnosis and treatment plan must be documented and available to the inspectors upon request. The licensee must ensure that all dogs receive adequate veterinary care at all times.

This was a focused inspection concerning only the non-compliant items cited under 2.40 (b)(2) on inspection report dated June 06, 2016. The following dogs were evaluated by a licensed veterinarian and received treatment:

Morkie puppy (DOB 4/13/16, Microchip # 7E10033722)  
Female Yorkshire terrier ("Jewel Sue", Tag #97, DOB 2009)  
Female Yorkshire terrier (Tag #80)  
Female, Yorkshire terrier ("Dolly Ann", Tag #89, DOB 2006)

The following dog received toenail maintenance:

Female Yorkshire terrier (#78)

Exit interview conducted with Kelly Maxwell, ACI, IDALS and the facility representative.
