Type: ROUTINE INSPECTION
Date: 13-MAR-2019

3.125(a)

FACILITIES, GENERAL.

The enclosure for two rhinoceros is constructed of four strands of metal cable supported by heavy posts. One section in the back of the enclosure was damaged by a fallen tree. At this point in the fencing the height of the cables is diminished by half, and the tree protrudes into the enclosure. This opening in the enclosure fencing could present a risk of escape or entanglement.

Animal enclosures must be constructed of such material and of such strength as appropriate for the animals involved, they must be structurally sound and maintained in good repair to protect the animals from injury and to contain the animals.

The tree was removed at the time of inspection, and new cable was added to achieve adequate height, but additional repairs are needed to the concrete footing, and this will be accomplished as the ground dries out, by June 1, 2019.

3.127(d) REPEAT

FACILITIES, OUTDOOR.

There is a section of this facility's perimeter fence that does not adequately fulfill the requirements described in 3.127 (d). The purpose of the perimeter fence, as described in this subsection, is to prevent people and animals from passing under or through the fence and entering the premises, and also to act as secondary containment, in the event that an exhibit animal should escape its enclosure. Additionally, the perimeter fence must be at least three feet from the enclosure fence to prevent contact through the fencing. At the time of this inspection the following problem was observed:

- A gate in the perimeter fence, which serves as the parking exit, is left open and unattended throughout the day. Whereas the entrance gate is visible to the nearby office area, and employees are available to monitor and close the gate if needed, this exit gate is more remote, and not easily monitored. The gate is just behind the primary

Inspection Report

enclosures for cheetahs and striped hyenas.

Failure to provide an adequate perimeter fence could put the well-being of the animals at risk, due to the possibility of harmful unauthorized contact with people or animals, including exposure to animals that could introduce diseases, and also due to the risk of inadequate containment in the event of an escape. The facility should continue with its plan to complete the perimeter fence and bring all sections into compliance.

This inspection was conducted 3/13 - 3/14/19, with an exit interview on 3/19/19. The inspection and exit interview were conducted with facility representatives.
