Type: ROUTINE INSPECTION
Date: 12-NOV-2024

3.158(a)(1)

Cleaning, sanitization, housekeeping, and pest control.

The peafowl have access to the top part of the outdoor two-enclosure aviary structure, where they roost on the roof and defecate. Excessive accumulation of excreta was present on the wire mesh roof of the aviary, where directly below the accumulations, birds such as ducks, chickens and guinea fowl were resting or using aquatic areas. The facility representative indicated this part of the primary enclosure needed to be cleaned. Failure to remove excreta from the top of the aviary as often as necessary may cause birds housed within to become soiled or exposed to disease hazards from particulates that fall through the wire mesh roof (approximately 0.5-inch square openings). Excreta and food waste must be removed from primary enclosures and from under and around primary enclosures as often as necessary to prevent excessive accumulation of feces and food waste, to prevent the soiling of the birds contained in the primary enclosures, and to reduce disease hazards.

Correct by 15 November 2024.

This inspection and exit interview were conducted with the facility representative.
