PUEBLO ZOOLOGICAL SOCIETY

Type: ROUTINE INSPECTION

Date: 21-JUN-2023

2.40(b)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

The male sun bear "Barney" is currently undergoing treatment directed by the attending veterinarian which involves administering gabapentin twice daily. The treatment sheets show that the second (PM) dose was missed on 4/28/2023, 6/6/2023, and 6/19/2023 due to keeper staff forgetting to medicate. There are also multiple treatment sheets for different animals that have blank spots for treatments and no notes regarding why doses were not recorded.

Not following the attending veterinarian's instructions for medications can lead to inadequate treatment of issues and worsened outcomes for the animals. Failure to follow facility documentation standards can also lead to mistakes in treatment. The facility must give medications as directed by the attending veterinarian. The facility must use appropriate methods to prevent, control, diagnose, and treat diseases and injuries.

To be corrected by 6/29/2023.

2.40(b)(3)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

One female De Brazza's monkey gave birth overnight between Sunday and Monday. When staff conducted their morning check on Monday, the neonate was found deceased. The protocol for the facility is to contact the attending veterinarian as soon as any births or deaths are discovered; however, the vet was not contacted until Tuesday. The attending veterinarian stated that they expected to be contacted earlier.

Delayed communication with the attending veterinarian can impact necropsy results and assessment of potential issues. A facility representative must observe all animals daily and then ensure a mechanism of direct and frequent communication with a veterinarian so that timely and accurate information on problems of health, behavior, and well-being are conveyed.

To be corrected by 6/29/2023.

Inspection Report

Feeding.

In the building used for food storage, there are at least six bags of expired primate food among non-expired bags. The expiration dates range from January 2023 to May 2023. There are no notes or tags stating that these expired bags should not be used for diets.

Palatability and nutritive value cannot be guaranteed in expired food. Any food fed by the facility must be clean, wholesome, and palatable to the animals. It must be of sufficient quantity and have sufficient nutritive value to maintain a healthful condition and weight range of the animals and to meet its normal daily nutritional requirements.

To be corrected by 6/29/2023.

This inspection and exit interview were conducted with facility representatives.
