TEXAS A&M UNIVERSITY DEPT OF VET PHYSIOLOGY

Type: ROUTINE INSPECTION  
Date: 13-SEP-2017

---

### 3.125(a)

#### FACILITIES, GENERAL.

The roof of the open air barn housing the goats has insulation panels on the interior surface. The panel covers are torn in multiple areas with exposed insulation (presumably fiberglass) and pieces of damaged panel cover are dangling from the ceiling. The goats are housed in three separate stall areas under the insulated ceiling. Exposed fiberglass and pieces of dangling panel cover are visible in the ceiling over all three housing areas. Fiberglass exposure could cause skin, ocular, respiratory or gastric irritation and ingestion of insulation or panel covering could cause foreign body related illnesses.

Indoor and outdoor housing facilities shall be structurally sound and maintained in good repair to prevent injury to the animals. The damaged insulation panels should be removed, repaired or replaced. Correct by: October 18, 2017.

The inspection and exit interview were conducted with TAMU executive director CMP.
