Type: ROUTINE INSPECTION
Date: 08-FEB-2017

3.28(a)(1) REPEAT

PRIMARY ENCLOSURES.

Enclosure number 45 housing 8 guinea pigs still needs repair. This enclosure has broken, bent, and detached wire on the lower edge of the wire mesh above the plastic lumber on left side. The broken, bent wires are at the height of the heads of the adult guinea pigs and may cause injury to the animals. On the opposite wall the wire mesh has rusted through at lower edge (above the floor) leaving sharp points that may injure the animals. Enclosures must be structurally sound and maintained in good repair to protect the guinea pigs from injury and to contain the animals securely. The enclosure must be repaired or replaced to prevent injury to the animals and to prevent escape. The eight guinea pigs were moved to a new enclosure at time of inspection.

Note: The attending veterinarian examined and prescribed treatment for the guinea pigs cited on the inspection report dated November 16, 2016.

This inspection and exit interview were conducted with the owner.

Additional Inspectors

Geib Mary, Veterinary Medical Officer
