SIERRA NEVADA ZOOLOGICAL
SOCIETY

Type: ROUTINE INSPECTION

Date: 15-DEC-2021

3.84(a)

Cleaning, sanitization, housekeeping, and pest control.

In the primate building east side that housed 4 lemurs and 2 Olive baboons, the area (aprox. 1 ft x 3 ft) under the cages around the floor drain had a thick layer of black muck including fecal material, hair, and food waste occluding the drain and preventing drainage. Excreta and other waste materials must be cleaned from underneath the cages as often as necessary to prevent excessive accumulation of waste materials which could lead to disease hazards, pests, and odors.

To be corrected by 12/30/2021.

3.131(c)

Repeat

Sanitation.

A pallet of donated items wrapped in plastic was placed too close to the leopard enclosure. Strands of plastic wrap hung within inches of the front of the cage within easy reach of the leopard. These plastic strands could lead to entrapment or be ingested causing harm or illness to the leopard. Premises must be kept clean and tidy to protect the animals from injury.

This inspection and exit interview were conducted with manager.
