Type: ROUTINE INSPECTION
Date: 23-APR-2025

3.153(a)(1)(ii) Critical

Primary enclosures.

On April 3, 2025, one male Indian ringneck (rose-ringed parakeet) was found deceased in his enclosure after becoming entrapped in the wire feeder station. According to the licensee, the bowl used in the feeder was likely the wrong size which allowed the bird to push his head through an opening between the wire and the bowl but did not allow him to get back out.

Enclosure design that allows birds to become entangled or entrapped can lead to stress, injury, or death. The licensee must ensure that primary enclosures are constructed and maintained so that they protect the birds from injury. To be corrected from this day, April 29, 2025, forward.

This inspection and exit interview were conducted with the licensee.
