AUSTIN AQUARIUM
13530 N. Hwy 183 #101
AUSTIN, TX 78750

Customer ID: **331570**
Certificate: **74-C-1084**
Site: 001
AUSTIN AQUARIUM

Type: ROUTINE INSPECTION
Date: 13-JAN-2022

3.131(a)

Sanitation.

The water of the pool inside the capybara enclosure is not being adequately cleaned. The water is cloudy and brown/yellowish in color. There is fecal matter floating around and buildup of brown material at the bottom of the pool. The capybara pool does not have a filtration system and relies solely on manually water changes. Capybaras are semiaquatic animals that normally defecate and urinate in the water. There was potable water for drinking in the enclosure. Accumulation of excreta in water features can affect the health and well-being of the animal. Excreta shall be removed from primary enclosures and water cleaned as often as necessary to minimize disease hazards and make sure the water quality does not cause a health problem.

Correction date: January 20th, 2022

This inspection and exit interview were conducted with facility representative.
