Type: ROUTINE INSPECTION  
Date: 04-APR-2016

### 2.40(b)(2)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The male approximately 7 year old Pug (#45) had an thick build up of tartar on all the remaining teeth. The tartar was brown in color and encased the teeth. The lower right teeth could not be identified as individual teeth. The tongue protruded from the mouth on the right side, also. The Pug also had a small mass of about 1/4 inch in diameter on the right eye that had not been seen by a veterinarian. The licensee stated that she was not familiar with that breed of dog, she only has one, and did not know the dog needed to be seen by a veterinarian.

Dental disease can cause damage to the gum tissue, and tooth and mouth structures, be painful, and impact the ability of the dog to eat normally, affecting the overall health of the animal. Eye problems can be due to trauma, infection, and other medical problems and can be painful and affect vision. The license must have this animal examined by a licensed veterinarian in order to ensure that an accurate diagnosis is obtained and an appropriate treatment plan is developed and followed. This information including the diagnosis, treatment, and resolution of the condition must be documented and made available to the inspector upon request. TO BE CORRECTED BY: April 11, 2016

### 3.11(b)(2) REPEAT

#### CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

In all of the outdoor portions of the sheltered housing and all of the inside and outside surfaces of the shelters in the outdoor enclosures had a build up of brown dirt and grime. The bedding did not seem soiled. In at least shelter had cobwebs covered in dust along the ceiling portion.

All used primary enclosures must be cleaned and sanitized once every two weeks, or more often if necessary to prevent the buildup of dirt, grime and other disease hazards. This shelter must be cleaned, sanitized and maintained in a way to prevent any further buildup of dirt and grime. Licensee must ensure that all enclosures remain free of accumulations of dirt and grime in order to promote the health of the dogs.

The inspection and exit briefing were conducted with the licensee and ACI Bartels.
