Type: ROUTINE INSPECTION
Date: 07-JAN-2025

2.40(b)(3)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

Female Shih Tzu (#77)'s eyes were gray/hazy on the surface and the white part of the eyeball was reddened and eyelids were crusted with some wet hair. These are signs of an active eye problem that was pointed out during inspection and wasn't under treatment or by the facility. Untreated eye problems could worsen and cause discomfort. Ensure that this dog's eyes are seen by the attending veterinarian for treatment guidance and follow the treatment plan.

***Correct by 1/10/2025.

3.10(a)

Watering

Three adult dogs had empty water bowls at the time of inspection. The licensee provided them water and they did not drink much when given water or appear thirsty, however regulations require that they have access to potable water at all times. Access to potable water at all times helps promote the health of the dogs. If water bowls are used, ensure that they are checked and filled often enough to ensure that dogs always have access to potable water.

***Correct from 1/7/2025 forward.

3.13(a)(4)

Veterinary care for dogs.

Female Shih Tzu (tag #77) had matted hair by her face and areas of loosely matted hair on her legs and tail. Matted hair can cause discomfort and skin problems. To provide for their health, ensure dogs hair is maintained free from matting.

***Correct by 1/11/2025.

This inspection and exit interview were conducted with a facility representative.
