3.31(a)(1) Repeat

Sanitation.

Some of the enclosures are wet and/or heavily soiled. Lower pens seem more commonly affected. Though cleaned and sanitized just three days ago, effected enclosures remain too dirty. A dirty enclosure contributes to animal stress and disease. Primary enclosures shall be cleaned and sanitized often enough to prevent an accumulation of excreta and debris. A program must be developed and maintained which provides effective cleaning and sanitation.

Remains Uncorrected

This inspection and exit interview were conducted with a family member.
