PHOENIX HERPETOLOGICAL SOCIETY

Type: ROUTINE INSPECTION
Date: 11-MAR-2015

2.40(a)(1)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

***The written Program of Veterinary Care (PVC) on file is incomplete. The required information detailed in sections 1 and 3 of APHIS form 7002 have not been completely filled out. The PVC is a written agreement between the exhibitor and the attending veterinarian establishing standards of care for the animals. Failure to have a complete PVC could jeopardize the health and well-being of the animals. The facility should establish and maintain a PVC to include all the regulated animals at the facility.

To be corrected by 3/25/15.

3.125(a)

FACILITIES, GENERAL.

***The primary enclosure housing 1 raccoon had a climbing platform/apparatus which had frayed edges with long strands of the carpet fibers accessible. The frayed strands pose a risk to this animal for ingestion and intestinal obstruction. The indoor and outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury and to contain the animals.

To be corrected by 3/18/15.

3.130

WATERING.

***The primary enclosure housing 1 beaver uses a dive pool for the available potable water source. At the time of the inspection, the water was very turbid and full of debris and would not be considered safe for drinking. The licensee stated the beaver had no other source of drinkable water but the facility would add another source of water to the enclosure.

If potable water is not accessible to the animals at all times, it must be provided as often as necessary for the health and comfort of the animal. Frequency of watering shall consider age, species, condition, size, and type of the animal. All water receptacles shall be kept clean and sanitary.

To be corrected by 3/12/15.

Prepared By: AARON RHYNER, D V M USDA, APHIS, Animal Care
