Type: ROUTINE INSPECTION  
Date: 11-AUG-2025

---

### 3.1(c)(3)

#### Housing facilities, general.

Enclosures are not being cleaned properly. In approximately 6 sheltered primary enclosures housing approximately 6 adult dogs, the door leading from the inside section to the outside run and the frame surrounding these doors are soiled with brown material. Inadequate and infrequent cleaning and sanitization allows for the growth of disease-causing agents that may increase the risk of health hazards for the animals. Appropriate cleaning and sanitization of the surfaces must include removal of the buildup of material found and to prevent accumulation of this material. All surfaces of housing facilities must be cleaned and sanitized when necessary to satisfy generally accepted husbandry standards and practices. Correct by ensuring hard surfaces with which the dogs come into contact with are spot cleaned daily and sanitized in accordance with 3.11 (b) of this subpart to prevent accumulation of excreta and reduce disease hazards. Correct by 29-AUG-2025.

### 3.13(b)(4)

#### Veterinary care for dogs.

The Licensee was unable to provide documentation of fecal tests performed. The Licensee stated that fecal tests for 10% of adult dogs were performed last year in accordance with the schedule in the Program of Veterinary Care but they could not provide the test results. Failure to document testing results may interfere with the ability of APHIS officials to determine if the animals are receiving adequate veterinary care. Medical records must be maintained and include the dates and findings/results of all screening, routine, or other required or recommended test or examination. Correct by documenting the results of all testing and ensure that medical records are complete and contain the required information. Correct by 18-AUG-2025.

This inspection and exit interview were conducted with the Licensee.
