Type: ROUTINE INSPECTION
Date: 28-SEP-2015

3.50(a)

FACILITIES, GENERAL.

*** The cages containing 4 rabbits had gaps between the wire net floor and the walls of the cage. The cage floors were coming loose from where it attached to the walls. These gaps could cause the animals to become entangled, escape or injury from falling out the bottom of the cage 2-3 feet to the ground. The rabbit cages should be maintained in good repair to protect the animals from injury and to contain the animals.

Correct by 10/12/15

3.125(a) REPEAT

FACILITIES, GENERAL.

*** The primary enclosure containing the goats Tulip and Dinah had holes underneath the fence that were 12 inches by 24 inches. These holes were large enough to allow the goats to escape or possible harm themselves by becoming entangled in the process. The enclosure should be maintained in good repair to protect the animals from injury and to contain the animals.

*** The primary enclosure containing the goats, No Ears and Odie, and the potbellied pig, Bullseye, had a black netting that covered the top of the enclosure. The netting had been torn and was hanging into the pen. The netting could cause the animals to become entangled or cause harm if ingested. The gate to the enclosure did not have a means to latch it to remain closed and contain the animals. There was also a piece of tin that was part of the enclosure wall that had been bent and was sticking out into the pen and could injure the animals. There was a pallet in the pen that had several nail heads exposed by about 1 inch that could injure the animals. The facilities should be maintained in good repair to protect the animals from injury and to contain the animals.

*** The primary enclosure containing two llamas had a section of fence that had become unattached from a post and was sagging down about 18 inches from the ground. This could allow the animals to escape or possibly become entangled in the wire. The fence should be maintained in good repair to protect the animals from injury and to contain the animals.

3.131(c) REPEAT

SANITATION.

*** The enclosure housing 10 goats contained several pieces of hay bailer twine throughout the pen. This material poses a risk of injury to these animals due to possible ingestion and entanglement. The premises shall be kept clean and in good repair to protect the animals from injury.
