Type: ROUTINE INSPECTION
Date: 18-AUG-2015

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

An adult female Boston terrier (m/c# 003 271-001) had an area of thinning hair about 6 inches in diameter located on her right side and abdomen behind her elbow. The skin in this area was reddened and had numerous tiny scabs. The licensee had noticed the problem but the dog was not receiving treatment and the licensee had not consulted a veterinarian about the problem. Skin problems can be painful, can progress, and can be the result of an underlying medical condition. The licensee must have this dog examined by a veterinarian for diagnosis and treatment. The licensee must present written documentation of the treatment upon the inspector's request.
TO BE CORRECTED BY AUGUST 25, 2015.

2.75(a)(1)(6)

RECORDS: DEALERS AND EXHIBITORS.

Six of the 14 dogs listed on the Dogs on Hand (APHIS form 7005) did not have identification numbers on the paperwork. Properly completed acquisition records are necessary for identification of dogs to facilitate record-keeping requirements for inventory, disposition, transport, and healthcare. The licensee must update this Record of Acquisition and maintain the record on a regular basis so that it always has accurate information regarding acquisition, identification, and disposition for all dogs.
TO BE CORRECTED BY AUGUST 25, 2015.

3.1(e)

HOUSING FACILITIES, GENERAL.

(e) Storage.

Open bags of dog food were laying on the floors of both buildings that housed dogs. Improperly stored dog food can become contaminated by pests and can spoil. The licensee must ensure that all open supplies of dog food are stored in leakproof containers with tightly fitting lids to prevent contamination and spoilage.
TO BE CORRECTED BY AUGUST 25, 2015.

3.3(e)(1)(3)

Inspection Report

SHELTERED HOUSING FACILITIES.

(e) Surfaces.

One enclosure housing an adult Boston terrier had been chewed all the way around the dog door on the outside portion of the enclosure. A large amount of wooden subsurface was exposed and was not impervious to moisture. Surfaces that are not impervious to moisture can not be cleaned and sanitized properly. The licensee must repair or replace this area so that it can be properly cleaned and sanitized.

TO BE CORRECTED BY AUGUST 31, 2015.

3.6(a)(2)(2)

PRIMARY ENCLOSURES.

A wire enclosure housing unweaned Boston terrier puppies had a hole in a wall panel that was 2 inches high and 7 inches wide. The puppies were observed putting paws through the opening and attempting to push their heads through. This could lead to entrapment and injury of the puppies. The licensee must ensure that primary enclosures are constructed and maintained so that they protect the dogs from injury.

TO BE CORRECTED BY AUGUST 21, 2015.

3.11(c)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

(c) Housekeeping for premises.

Weeds and grass were growing on all sides of the whelping building up to the level of the bottom row of enclosures which housed adult dogs and puppies. Excessive weeds and grass provide hiding and breeding places for pests such as insects, rodents, and snakes. The licensee must establish an effective program to control weeds and grasses.

TO BE CORRECTED BY AUGUST 25, 2015.

The inspection and the exit briefing were conducted with the licensee and an inspector from the Missouri Department of Agriculture.
