Customer ID: **6020512**
Certificate: **73-A-2876**
Site: 001
David Wiebe

Type: ROUTINE INSPECTION
Date: 18-DEC-2024

3.158(b)(1)

Cleaning, sanitization, housekeeping, and pest control.

There were several problems related to cleaning and sanitization throughout the facility.

- In the two main barns, the group housed parakeets have a thick layer of feces, waste and debris that has formed into a crust covering the floors of the cages. These floors are not being cleaned between groups of birds. The facility must scrape, clean and sanitize these floors as often as necessary to prevent this kind of waste accumulation.
- Numerous plastic feeders have an accumulation of grime, debris, feathers, and cobwebs on both the outside and inside. Several feeders have been repaired with duct tape, which cannot be properly cleaned and sanitized. This is a source of contamination to the enclosed birds. The feeders must be cleaned and sanitized as often as necessary to prevent this kind of accumulation. The feeders repaired with duct tape should be replaced with intact feeders.
- In the small barn, plastic jug sections are being used to scoop feed from storage bins. One of these plastic jugs has a thick layer of dark, crusted debris covering the inner surface of the scoop. This scoop is a source of potential feed contamination, and should be replaced with a new scoop.

Correct all by 23 December 2024

3.158(c)

Cleaning, sanitization, housekeeping, and pest control.

- The second large barn has numerous cobwebs on the ceiling, located above the bird cages. The upper cages have no top cover to protect the birds, and the self feeders in these cages do not have covers to prevent feed contamination. This is a potential source of contamination to the enclosed birds. The facility must remove these cobwebs, and must clean as often as necessary to keep the facility at an appropriate level of cleanliness.

Correct by 20 December 2024

This inspection and exit interview were conducted with licensee.
