

Inspection Report

Noahs Lost Ark Inc
8424 Bedell Rd
Berlin Center, OH 44401

Customer ID: **328710**
Certificate: **31-C-0234**
Site: 001
NOAHS LOST ARK INC

Type: ROUTINE INSPECTION
Date: 15-OCT-2015

3.125(a) REPEAT

FACILITIES, GENERAL.

3.125 (a) REPEAT
Facilities, general

***The following areas were found in need of repair or replacement:

1. The resting perch for a lion named Katie requires repair or replacement. Several resting boards are loose from the structural supports.
2. The hotwires for 3 enclosures (one housing 2 black bears Bart and Heather, a second housing the liger Sophie and a third housing the lion Garfield) were not functional at the time of this inspection. Power cords to these units must be left connected and plugged in to ensure these enclosures properly contain the animals in them.
3. 6 primary enclosures were found with structural support poles leaning either inward or outwards. The enclosures affected were the following:
 - i. The wooden posts for the enclosure housing the bison named Elroy are leaning outward.
 - ii. The metal fence poles for the enclosure housing lions named Nichole and Paris are leaning inward.
 - iii. The metal fence poles for the enclosure housing a tiger named Lady are leaning outward.
 - iv. The metal fence poles for the enclosure housing a lion named Linus are leaning outward.
 - v. The metal fence poles for the enclosure housing a tiger named Sammy Jo are leaning outward.
 - vi. The metal fence poles for the enclosure housing a lion named Simba are leaning outward.

These areas are in need of repair or replacement. They are all areas of potential injury or escape. The facility must ensure that all animal enclosures are maintained to adequately contain the animals and protect them from injury.

THIS IS A REPEAT NON-COMPLIANT ITEM THAT REMAINS UNCORRECTED

3.127(d) REPEAT

Inspection Report

FACILITIES, OUTDOOR.

***The perimeter fence is currently inadequate and does not function as a secondary containment system. Although an 8 ft. high perimeter fence is present surrounding the facility, several areas behind big cat and bear enclosures have excessive overgrowth of weeds and small trees/vines making it difficult to inspect these areas for structural soundness. A perimeter fence that is maintained in good repair and not less than 8 feet in height is required for all outdoor housing facilities that maintain dangerous animals. Perimeter fencing protects the animals in the facility by ensuring in the event of an escape there is a secondary containment mechanism to prevent the animal from leaving the property and endangering the public. The facility has removed the building materials found leaning against or near the perimeter fence on the last inspection but still needs to remove large trees and remaining brush from the fence area.

Note: The facility still has until November 1, 2015 to correct removal or altering of trees which was original correction date on previous inspection.

THIS IS A REPEAT NON-COMPLIANT ITEM THAT REMAINS UNCORRECTED

***Inspection conducted with Randy Coleman, ACI and a facility employee on 15 October 2015. Exit interview conducted with the facility Director on 16 October 2015.
